

CODECASA 43 - M.Y. FERDY - F 68

With her 43mt of LOA, this vessel represents Codecasa Shipyards' standards, showing her superb materials quality and manufacture in all its characteristics. Thanks to her high tensile steel hull and to her aluminium superstructure, FERDY offers comfort, elegance and large spaces both outside and inside without losing her performances, as expected by a displacement yacht of 490 tons of tonnage. With her 2 Caterpillar 3512B diesel engines and propellers propulsion, this boat is able to reach 17 knots of top speed at light displacement and to offer a range of 3000 miles at the 13 knots of cruising speed. FERDY is able to accommodate up to 13 guests and 8 crew members.

The interiors, studied by architects Anna Maria and Franco Della Role, collaborating with Codecasa since many years, follow a very classic decorative style. All joinery on board is made of bleached oak wood, while the ceilings are lacquered white. Floors are all covered by a light carpeting, but for all bathrooms.

For these, in particular, marble is the material principally used in the Owner's and Guests bathrooms floors, while wood has been chosen for the two dayheads and for two of the Guests' bathrooms. In general, the interiors are characterized by a simple, linear and clean style, as expressly requested by the Owners.
